Increased usage = Inappropriate noise

The past week there has been an obvious increase in usage of the AES Plant in Redondo Beach during the day, assumedly due to the increased demand from the latest heat wave. Unfortunately, this has also meant a significant amount of noise--including a very loud blast at around 4am this morning that shook and awoke my entire house, half a mile from the plant.

Is there not a way that the steam release (which is what I'm assuming to be the root cause of the noise) can be controlled so that it happens during the day and not in the middle of the night?
