Nonresidential PV Projections

The nonresidential PV forecast approach seems to focus on available rooftops, although I expect they consider more is available site assessment. Where I live, a number of schools have installed carports above existing parking lots that are topped with PV arrays. I hope that the PV forecast process is considering parking lot areas throughout the state as targets for these "PV carports." I expect these types of installations will have different economic considerations than rooftop systems. I also expect that penetration curves may be different.
