## **Geographic Forecast Disaggregation**

To be useful, the geographic forecast disaggregation of the energy demand forecast will need to be supported by robust economic and demographic forecasts for the smaller areas in question. These econ/demo forecasts will need to consider factors such as available space for development and other environmental/social limiters to growth such as water availability, transportation infrastructure, and zoning. Hopefully sufficient budgets are being considered in order to develop these econ/demo projections and to ensure that the smaller area demand forecasts aren't just a statistical exercise.
