Petitions Opposing Mission Rock Part III

Additional submitted attachment is included below.

California Energy Commission,

Santa Paula is a predominately Latino, immigrant and low-income community. Communities like ours are targeted by large corporations for polluting projects at the expense of our community's health. The pollution will have its worst effects on the nearby vulnerable populations like Briggs Elementary School and the Limonera farmworker housing. The proposed plans place the power plant in the floodplain of the Santa Clara River, where future flooding will create a disaster and risk our power supply. The Santa Clara River is the last major natural river system in Southern California and the power plant will disrupt and contaminate the restoration of this environmentally sensitive habitat and the home of endangered species. We ask you to reject this proposal.
