Aliso Canyon Gas Storage Facility

I am a resident of Porter Ranch, CA. Both my children's schools had to be closed and were relocated from 12/18/15 through June, 2016. This So. Ca. Gas Co. gas blow-out catastrophe of 10/23/15, at the Aliso Canyon Gas Storage facility was a horrific and tragic catastrophe. This terrible event caused many many problems to tens of thousands of residents living, working, and going to school in the northwestern San Fernando Valley, CA. There were so many homes vacated, businesses closed, or store hours decreased, because most of Porter Ranch, that the community resembled a ghost town. Los Angeles Police Dept. had to send many extra patrol cars into these otherwise safe neighborhoods, due to the vast numbers of households relocated for the 4-months of the worst gas leak, blowout, in the history of the United States.

Please do not allow So Cal Gas/Sempra, to re-open Aliso Canyon. It is not safe for our health, the health of our children, nor the health of any resident in the Los Angeles basin. This storage facility is unsafe. This Aliso Cyn storage facility has storage wells and pipes that are older than half of the baby-boomer population alive today. Pipes with aged parts, wear and tear, unsafe casings, absent shutoff valves, and so much work to maintain, are not worth the obvious and proven risk to our citizens health. When public health is put second after corporate profits and unsafe business practices displayed by So Cal Gas, there is a serious problem. Please please please do not allow Aliso Cyn to be re-opened. If Aliso Cyn Gas Storage Facility is allowed to return-open will continue as a huge public health threat. Let So Cal Gas and its parent company/Sempra find alternative ways to bring electric power
