The staff final report, *California Energy Demand Updated Forecast, 2017-2027, (CEDU)* is prepared in support of the *2016 Integrated Energy Policy Report Update*. The staff report presents updated baseline forecasts of electricity consumption and peak demand for California and for utility planning areas within the state. The forecast update incorporates more recent economic/demographic assumptions and an additional year of historical data.

This staff final report will be presented for possible adoption by the California Energy Commission during the Business Meeting held Wednesday, January 25, 2017. The forecast, if adopted, will be used in a number of upcoming planning proceedings, including the California Independent System Operator's (California ISO) transmission planning and the California Public Utilities Commission's (CPUC) long-term procurement planning.
