Future EPIC Projects

I would like to see more EPIC funding available for demonstration projects for new/start-up companies that have a renewable energy/energy efficiency product or solution that is past the R&D stage. Many of the current/recent EPIC projects are very niche-oriented and not available to small companies that have a viable product - but whose utility hasn't been fully demonstrated yet. This could be anything from new pool pumps, to solar roof tiles, to smart water meters, to new consumer vehicles.
