funding for research on natural refrigerant use in supermarkets

My business, KW Refrigerant Management Strategy, works with multiple food retail companies in California, both large supermarket companies and small grocers. I also work with various companies that supply advanced refrigeration technology to these supermarkets. I support funding for the transition from high GWP refrigerants, i.e. super greenhouse gases, to natural refrigerants. There is a lack of data on the performance of these technologies in the field, especially with regard to energy efficiency. We need to make it affordable to install natural refrigeration technology if we want to see real change. This funding is an opportunity to drive a huge shift in the market in a short period of time.
