Support funding for transition to low-GWP technologies

I am a Representative of the Energy Smart Grocer Program, a third party provider for PG&E, employed by Clearesult Inc. The grocery store industry is both overwhelmed and confused by the choices and challenges in the refrigeration aspects of their businesses. The increased first cost of a low GWP system is the largest barrier. This is why I support funding of low GWP systems in this industry. If we want change, we have to start somewhere. This funding is the best way to start and get it done quickly.
