Docket Number: 16-EPIC-01

Supreme Court Partner, State of California

Four Stripes, One Star, reporting 1930s Depression in Canada photos of drought stricken areas during snow season. We found the Global Warming Effect is as such. Radiation based close proximity to the Sun caused Effect to dehydrate surface based on dryness or lack of moisture blocked by Sun's rays. Texas same. The other areas of the United States are predominantly covered by lush green foliage. Lack of plowing and cultivating drier climate areas caused moisture level to diminish, I.e., California. The earthquakes as seen in several photos on website depict high volcanic activity produced by same climatic conditions. This is similar to Sun's rays stagnant on surface overheating oil and gases below. The intensity of the heat dictates and the length of time allowed...two weeks 100 degree heat...my theory re drop in heat to cold differential causing quake based on differential discussed with Rob, Mines and Geology, Division of Oil and Gas. Hawaii was the first land mass that disappeared years ago. Changes in Maui, water from Canada. Dinosaurs were on another level underneath the surface of the earth whether dormant, existing in caverns and caves far below the surface of the earth. Herod's time, the abyss, Bermuda Triangle. Thank you for allowing me to be a part of the U.S.G.S. process and performance. Do not use e-mail.
