Aliso Canyon Gas Storage field.

The Aliso Canyon Gas Storage field, in Porter Ranch, is dangerous and completely unnecessary. It is located in a high fire danger area, and sits on top of a large and potentially dangerous earthquake fault. Numerous studies have shown that the gas stored in Aliso Canyon is completely unnecessary to maintain, and that no energy shortages have occurred because it has been shut down for some time now. Unfortunately, several gas leaks a day continue to take place, and too many Porter Ranch and surrounding area citizens still continue to be seriously sickened by the continuing Methane leaks. SoCalGasCo, meanwhile, has consistently refused to reveal all of the toxic chemicals or possible radionuclides that they have been using, and people fear for their future health and survival. Please, please, please, at least keep Aliso Canyon gas field closed down until a root cause study can be completed of the huge and disasterous gas blow out of 2015 can be completed. C
