MaxLite support for change in lifetime testing requirements for LED lamps

MaxLite would like to add our strong support for the latest proposal to allow manufacturers to report estimated lifetime for state-regulated LED lamps to the Commission pending completion of lifetime testing. We support any changes such as these that will reduce time-to-market for lamp manufacturers and availability of product for California consumers. Procedures that take such long testing procedures into consideration and allow "early certifications" have proved successful for many years in the ENERGY STAR lighting programs and we commend the Commission's efforts to take similar approaches with this proposal.
