NO to unnecessary pollution, risk and blight already denied by Oxnard

This "peaker" plant proposal has already been defeated by neighboring Oxnard on multiple grounds. Now an attempt is being made to exploit poorer and smaller Santa Paula, which does not have the same level of resources to resist it. California already has a surplus of energy sources, and is largely employing non-polluting renewable solutions alternatives to traditional greenhouse gas emitting plants. Do not waste more taxpayer dollars considering this project in Santa Paula or anywhere in California!
