Subject: Docket #17-BSTD-02

Important Concerning,

I'm limited computer access hope you can except my response without pdf.

Responsible parties I've been in this energy and real estate market for over 10 years. Working with contractors,banks,municipalities SMUD PGE SO CAL GAS,title 24 and assisting in implementing energy efficiency upgrades.

DOE is for both maximizing capitol investments and meeting California sustainability goals. A scoring system is what is required to quantify true residential energy projects. The Green appraiser is the certification that is in work today. Green Appraisers will assist linking true building science to true home dollar value for the Real Estate community.

Solar PV affects the home's scoring system which will soon affect value. Lots to add to this subject call me anytime.

Removing a HERS rater from an installation does no one a favor...no one.

NOT the owner, the bank, nor the home's future appraised value...Mistake removing a productive inline service for a small price that the builders normally pay for. The value of the its service in no way does it outweigh the benefits across the board. If it's cost, regulate how much the builder charges for a service he doesn't provide.

Take it from a certified:

Real Estate Inspector
BPI Analyst single n multifamily
HERS Rater I & II/ TITLE 24
FHA HUD 203K Consultant
