## **new minimum energy standards for commercial clothes dryers**

I understand the California Energy Commission is considering new minimum energy standards for commercial clothes dryers. I am totally against adding to the already cumbersome regulations that exist in California increasing making business more difficult and unprofitable. This particular in areas that serve no added benefit or protection to the customer. The Commercial Dryer manufacturers already have tremendous incentives to produce, and have been and are producing, more energy efficient dryers for both commercial and residential purposes. Stop intervening where no intervention is required and let the market operate has it's intended.
