Subject: HERS Solar

After being a HERS rater, a general contractor, a building performance contractor and a solar contractor I have a wide range of experience with the construction industry.

My general feedback, although in conception the HERS testing protocol represents an important series of testing to improve building standards, it has devolved into a "box to check" with ramped fraud and self-interest dominating the landscape.

I support the removal of the HERS requirement from new construction solar. Anything that slows down the adoption of solar or incumbers its adoption that is not 100% effective at providing real accountability is not supportive to the building industry at large.

Thank you!
