## **Make sure replacement works else lost money, screwed over-taxed public**

Gentlemen -

I'll keep it short; governments often waste money and stick taxpayers with the bill. Diesel-electric locomotive operators have spent enormous effort to find the MOST EFFICIENT way to move products and equipment over LARGE distances with the least amount of fuel possible in a reliable manner; the result was "the diesel-electric locomotive". I applaud your efforts, but as a patent creating/owning engineer, (patent # 9143080), I suggest someone find out how the "diesel-electric" study was organized and similar research rules be followed leading in the direction you've determined is best and follow those rules, if nothing else you need to miniaturize the diesel-electric drive systems of locomotives & ships down to bus size and use that.

You can't go wrong using PROVEN methods if all they need is miniaturization. We do miniaturization all the time in California.

Please don't waste taxpayer money. California does that often enough that CA has become a laughing stock. It's not unusual to laugh about how California wastes money as we (the only sane people in California) scheme about how we're going to ESCAPE. Please be different, be frugal.

WarrenR
