Eligible site eligibility requirements

In the Eligibility portion of the Site Locations it states that the site must be available to the public 365 days 24 hours a day; my question or comment is, if we have a potential site host, that meets all other requirements and their demand for chargers far exceeds the infrastructure that they currently have, combined with being a high security government-affiliated building, are there exceptions that can be made for such facilities? The chargers would be used 365 days and 24 hours a day solely with the demand the employment staff has for EV chargers due to EV VanPools and personal vehicles that are employed at the facility. Please consider businesses of this nature for exception on a case by case basis. Thank you.
