IEPR Zero Emission Buildings

I am writing in support of all electric zero emission buildings. It is critically important for California to eliminate fossil fuel combustion in our buildings if we are going to meet our climate action goals. With California's electric grid already one of the cleanest in the nation and getting cleaner every year, operating our buildings with clean electricity, can significantly lower our State's GHG emissions. Eliminating gas can also lower initial installation costs and operating costs and is healthier in our homes and safer in our streets. This is the future and the future is now.
