Decarbonizing Buildings is first step to clean energy future

Decarbonizing our buildings is the first step towards a clean energy future. It is required to meet our climate goals as a state. By first decarbonizing our buildings, we can then work towards further penetration of clean energy and renewables on our grid. The first step is to electrify, the second step is to provide cleaner electricity. Without first electrifying our buildings, further improvements towards cleaning the grid will have limited impact.
