Subject: Central AC energy efficiency

I have watched several of the slide presentations. It's interesting that the constitutional approach to giving people a choice and educating them to the best economic decision appears to be the least popular approach. It's sad that CA continues to force market towards EE and creates higher utility pricing like our current electric rates. Since when did the Energy Commission become the Energy "Efficiency" commission. I want lower priced and secure utilities. There is nothing about "green" in the Energy commission charter. When people have installed solar there is no incentive for more EE HVAC or raising the thermostat, it's actually the opposite. You can't have it both ways...

Stan
