Agenda

The workshop will include presentations and discussion of energy-related impacts of climate change focusing on results from California's Fourth Climate Change Assessment. Topics will include the impacts of climate change on energy demand, subsidence of levees, water management, and transportation fueling infrastructure.

A detailed meeting schedule will be posted prior to the workshop at <http://www.energy.ca.gov/research/notices/>.

Background

California is an international leader in advancing solutions to climate change and forward looking energy policies. Governor Brown called for expanding state adaptation activities through Executive Order B-30-15, with the goal of making the consideration of climate change a routine part of planning as well as “enhancing the resiliency of the electricity system while integrating increasing amounts of renewable energy.”

California’s leadership in climate change policy is built on a strong foundation of research addressing the impacts of climate change on the state, as well as strategies to dramatically reduce greenhouse gas emissions. California’s Fourth Climate Change Assessment (Fourth Assessment) advances actionable science that serves the growing needs of state and local-level decision-makers from a variety of sectors through a statewide summary report, nine regional reports, three topical reports, and more than 40 technical reports. The findings from the Fourth Assessment will be available online at www.ClimateAssessment.ca.gov.
