CA Energy Independence and a Greener CA

Please bring California into the 21st Century, and plan for the rest of this century and the next, by making business buildings go green. There is no good reason that just about every building in California should not have solar and/or wind power modalities. This will help decrease our dependence on fossil fuels, it will decrease our carbon footprint, it will improve our air quality, it will provide a huge number of jobs in the green tech industry which then broadens the tax base in our state. Widespread adoption of these green technologies will then significantly drop the price of those technologies. It's a win-win-win-win-win policy. We are moving to a 100% fossil fuel free existence and this will help catapult us toward achieving that goal.
