Jumpstarting building electrification

It is imperative for California to eliminate methane by transitioning to zero-emission homes and businesses. This will fight the potential disaster of out of control climate change, and improve air quality and safety in our communities.

I urge the Commission to prioritize building decarbonization and identify more strategies that will jumpstart electrification.

It's clear that electrifying over 13 million homes and buildings across the state will take all hands on deck. The IEPR should help prompt a successful transition toward zero-emission buildings.

Thank you.
