## **Jumpstarting building electrification**

I am lucky in that our residential property doesn't have natural gas plumbed to the house. We have solar panels and our power isn't reliant on any fossil fuels. It is a great way to go! It is safer for the community and better for the environment. And really, it isn't difficult, the technology is readily available; it is a better way! We just need this kind of arrangement in more homes and businesses to embrace electrification on a wider scale.

California must move away from methane and transition toward zero-emission homes and businesses. This will improve air quality and safety in our communities.

I urge the Commission to prioritize building decarbonization and identify more strategies that will jumpstart electrification.

The IEPR should help prompt a successful transition toward zero-emission buildings.

Thanks for your help on shifting California to a clean energy future.
