Jumpstarting building electrification

California must move away from methane and transition toward zero-emission homes and businesses. This will improve air quality and safety in our communities.

I urge the Commission to prioritize building decarbonization and identify more strategies that will jumpstart electrification.

It's clear that electrifying over 13 million homes and buildings across the state will take all hands on deck. The IEPR should help prompt a successful transition toward zero-emission buildings.

Finally, providing guidance toward electrification will lead to greater advances in R&D for those needed appliances (water heaters, furnaces, etc) for all sizes of building, that are sometimes lacking if there isn't a perceived market for them yet. Thank you for considering this letter.
