100% renewable for housing sector

All applicable rooftops in the housing sector need to have solar installed. if all applicable rooftops in the country would have solar, that would reduce residential electrical grid use by 40%. One way this can be enforced by new construction requiring solar, as well as the resale of existing homes. Federal tax breaks and State incentives have been helpful so far. I have used them. The rate of change of solar rooftops to plain rooftops needs to increase much more quickly. California can look on the oncoming climate change as a threat. Just as people offer their children to fight in a war, people can offer their rooftops.

thanks

Steve Hunt
