Jumpstarting building electrification

California must move away from methane and transition toward zero-emission homes and businesses. This will improve air quality and safety in our communities. Gas is polluting and it's dangerous. We need to get it out of our energy system, and especially out of our homes and buildings.

I urge the Commission to prioritize building decarbonization and identify more strategies that will jumpstart electrification.

It's clear that electrifying over 13 million homes and buildings across the state will take all hands on deck. The IEPR should help prompt a successful transition toward zero-emission buildings
