Advocate for Clean Energy California

The fracked gas that powers our water heaters, furnaces, clothes dryers and stoves not only harms the climate, but poses major safety, air quality, and health risks to our families and communities. Gas is polluting and it's dangerous. We need to get it out of our energy system, and especially out of our homes and buildings. Californians need and want to choose clean energy alternatives. A California Energy Commission plan that lays out how California can address its energy use must move us away from gas to clean electricity to power everyday household appliances and our homes. I urge you to work for a Clean Energy California.
