## **Need Clean Energy**

California needs to get away from gas and rely on clean electricity for new construction of homes and businesses. My own community recently switched power providers and I am proud to say that my home is run off of renewable energy even though we don't have our own solar system on the house. Natural gas obtained through fracking is harmful to our environment and local communities. Pumping toxic chemicals into the ground pollutes the earth for growth of crops, water sources, causes health problems as well as possible seismic activity. There are safer alternatives for energy that we should be focusing on for a safer future.
