2018_11_11 Second comment_Retrofitting_Phase 2 Pre-Rulemaking, Sprinkler Spray Bodies

Retrofitting with new pressure regulated devices might not be that easy. That is because the older systems have sprinklers placed in certain places with water shooting from them. If one replaces one of those older ones with a more pressure regulated sprinkler head, the water from that might not reach plants that were previously reached. One might have to dig and install more irrigation pipe.
