Transitioning from gas to solar and other renewable energy sources

It is imperative that California makes the transition from fossil fuels especially natural gas to the use of renewable energy sources resulting in zero-emission homes and businesses. This will improve air quality and safety in our communities.

I urge the Commission to prioritize building decarbonization and identify more strategies that will make zero-emission homes and business commonplace.

I urge the IEPR to help make this a successful transition. The benefits of electrifying over 13 million homes and buildings across the state far exceeds any difficulty in making it happen and is more than worth the effort. Our future depends on it.
