With California's goal of 1.5 million zero-emissions vehicles on the road by 2025, increasing numbers of drivers are seeking businesses that offer EV charging – when running errands, traveling or considering options for shopping and dining destinations. EV charging helps build goodwill and customer loyalty with surveys showing it increases customer dwell times by an average of 50%.

Take advantage of substantial rebates from FCIP which is a part of the California Electric Vehicle Infrastructure Project (CALeVIP). Visit the CALeVIP website to learn more about regional incentives designed to help finance electric vehicle (EV) charging equipment at public locations.
