## **Renewable energy offsetting grid power**

We are considering installing solar panels to offset our electricity usage for our groundwater pumps. Since they would not be directly tied to each pump, but rather offsetting our usage on our bill, would this qualify as a renewable energy project under REAP? And if yes, would we also be able to apply for funding to replace and permanently retire Tier 2 Interim diesel pump with an electric pump? We are part of the Yolo Solano Air Quality Management District.

Thank you
