Good morning:

We are seeking addition clarification regarding the following item, Section 2: “The Energy Commission may authorize subsequent batches of stations (one batch at a time) on a first-come, first-served basis if: (A) all stations under previously-approved batches have approval to build from their respective authorities having jurisdiction (AHJs) within 18 months of the Energy Commission authorizing the station(s) under the agreement.”

Question 1: what occurs if all stations under the previously-approved batch do not have approval to build from their respective AHJ within 18 months? For example, are the remaining batches in the awarded tranche disqualified from funding?

Question 2: if a station under the previously-approved batch has become non-viable for permitting, can it be removed from the batch? Provided the remaining stations in the previously-approved batch have approval to build from their respective AHJ within 18 months, would this action render this condition for Energy Commission authorization of subsequent batches of stations met?

Thank you in advance for your reply,
Kira Dunn
