Dear Energy Commission,

I submitted a comment letter but do have one follow-on thought I would like to share for the docket.

Since you are allowing diesel substitutes for funding eligibility, you may want to consider adding jet fuel replacements as well. The technology / production process is very similar, and many facilities that produce renewable diesel also produce renewable jet fuel.

The precedent for this is under the Low Carbon Fuel Standard, which now allows for renewable jet fuel as an opt-in credit generator.

Thank you,

Mary K. Solecki
