Background

The extraction, treatment, and conveyance of water and the treatment and disposing of wastewater consumes approximately 20 percent of statewide electricity. The Electric Program Investment Charge program has funded projects focused on reducing energy use by California's wastewater and municipal water facilities. Some projects have shown promising results for reducing energy costs. This workshop will provide information on promising technologies, next steps to broader deployment of the

technologies, and research needed to reduce the energy and carbon intensity of the treatment and delivery processes for municipal facilities.
