Oppose utility attempt to slow progress

We need to transition ASAP to new renewable forms of energy such as solar. The easiest way to start the change is to incorporate solar into new housing. A large utility doesn't want to do that. If they oppose new safer, cleaner, more cost effective ways of lighting and supplying energy to our everyday lives, they should get out of the business of supplying energy in this state! Do not give into their demands! Solar has dropped to being cheaper than old fashioned forms of energy. Do the smart thing and do what our next generations need and make solar the way we automatically energize our new homes!
