In Support of Electrification Reach Codes

We at EHDD Architecture is writing in strong support of the local ordinances exceeding Title 24. Our office has been designing all electric buildings in California starting in 2001 and has completed over a dozen such projects successfully. We began designing all electric in to achieve zero net energy buildings with PVs supplying the power needed. But after 20 years we have failed to see zero energy buildings scale up fast enough to meet California's climate goals. We now are convinced the fastest path is to decarbonize California's electric grid and design all electric buildings. Our grid is very rapidly decarbonizing, and our industry is very much ready for all electric buildings. We have a very wide range for large developer office buildings, to schools and universities, to science museums. We have collected an extensive series of California all electric buildings of all types and sizes in the attached slide deck. We encourage you to support these leading cities in adopting their local ordinances. Sincerely, Scott Shell, FAIA, Principal, EHDD
