JA-13 is an important move forward--please adopt it

Honorable Commissioners,

I write to support the adoption of JA-13's thermal storage specifications. The effort to develop this standard was thorough and collaborative, it includes the best thinking of industry partners and efficiency experts, and reflects the real world abilities and constraints of heat pump water heaters. It has the potential to save rate-payers money while reducing GHGs and making a better balanced electrical grid.

Sincerely,
Sean Armstrong
Managing Principal
Redwood Energy
