Need more high capacity H2 stations and H2 supply

Dear Sirs/Madams,

I've been driving hydrogen fuel cell cars from 2017 and fully convinced that hydrogen fuel cell cars are ready to replace conventional gasoline cars. In addition, the fact that California has been being forced to send electricity to neighboring states and country (Mexico) with negative price even with the current level of renewable energy source deployment clearly indicates that we must develop scalable energy storage solution such as large scale liquid hydrogen production and distribution in order to decarbonize California's energy supply beyond transportation. We must act on developing green hydrogen production facilities, distribution infrastructure, and extensive hydrogen fueling station network now. Your effort on these area will be greatly appreciated by the whole world for generations.

I look forward to seeing those activities in very near future.

Best regards,
Tadashi Ogitsu
