User Input after driving a Clarity for 2 years

There needs to be more reliable supply of H2 at existing stations. The constant H2 shortages, especially after the Santa Clara Air Product accident and during holidays was and is horrible. After that, pumps need to be improved and made more reliable. Broken pumps takes weeks or months to be repaired. There shouldn't need to be a 2-5 minute wait between car fill up for the pump to work. Pump technology needs to be improved. Lastly, new stations shouldn't take many years to be build. I put my name on the list for a Clarity in 2017 after seeing a H2 station will be going in 1 block from me. I waited 11 months for car delivery and been driving it for 2 years. The station one block away is still not up and running. Construction started late last year and progress is moving at a snail pace. I wonder if it will be running before my lease runs out next Feb.
