Hydrogen Highway Act II

Many years ago California made a wise investment to create the beginning of the Hydrogen Highway. The plan was to develop a long term alternative to fossil fuel powered vehicles. That investment has yielded thousands of hydrogen fuel cell vehicles and close to forty fueling stations. That was the beginning and now it's time to move forward by expanding the fueling station network throughout all of California and beyond to service the growing market of cars, trucks and buses that will come if the infrastructure is expanded. I have driven a fuel cell car for three years and will be leasing a new one in a couple of months. Large commercial fuel cell trucks will be delivering freight across the country within the next twenty four months. California led the way and now it is time to continue that leadership long into the future. The new money invested will small when compared with the bullet train which Californians will not see any benefits for decades, if ever. Please make that relatively small investment now and see immediate returns.
