Comment for May 29, 2020 DER workshop

During today's workshop CalETC's recommended adding to the DER roadmap the highly rated VGI projects that were developed, reviewed and approved through the VGWG (<https://gridworks.org/initiatives/vehicle-grid-integrationwg/>). I agree with CalETC. The was to answer three questions from the California Public Utilities Commission:

- 1) What VGI use cases can provide value now, and how can that value be captured?
- 2) What policies need to be changed or adopted to allow additional use cases to be deployed in the future?
- 3) How does the value of VGI use cases compare to other storage or DER?

All of which are relevant to this effort.

It included close to 100 stakeholders from EV/EVSE OEMs, IOUs, policy makers and individuals. It represents thousands of hours of work and is a great resource of information for leveraging EVs as DERs
