RPS-16-03 Percentages for each compliance period

RPS-16-03 Percentages for each compliance period

Perhaps the use of calculation to specify percentage of total kilowatthours each compliance period will not work for all conditions?

What are the percentage of total kilowatthours sold to the utility's retail end-use customers, each compliance period to comply with 399.30(a)(1), for the compliance period?

What are the percentage of total kilowatthours sold to the utility's retail end-use customers, each compliance period to comply with 399.30(a)(1), when exclusions under 399.30(c)(4) result in zero retail sales for kWh for the compliance period, or for any of the "soft targets" years?

How will the specified percentages each compliance period be calculated if a utility charges only per time period and does not sell electricity products per quantity of kWh?

How are the "soft targets" used to show reasonable progress in each of the intervening years if the "soft targets" show greater amounts than results claimed for power content labels for the same year?

These inquiries are submitted pursuant to Government Code - GOV 11346.5. (b).
