Offshore Wind Farm

I am worried that the proposed offshore wind farm on the Big Sur coast will be visible from shore and will disrupt from the unique beauty of a horizon uninterrupted by eyesores. I am also concerned this far would interfere with migrating ocean mammals and birds. I am for clean energy alternatives, but what objective documentation does the CEC have that the proposed farm will not dominate or take away from the view horizon? Are there other options, such as far enough offshore to not be visible or to interfere with migrating animals?
