Docketed Date:	7/16/2020		

Community Microgrid Enablement Program

Disadvantaged Communities Advisory Group

Meeting

July 17, 2020

30 Minutes to Hear from You!

Meeting Objectives:

- 1. Provide DACAG with an overview of the CMEP initial design concept.
- 2. Gather DACAG thoughts and suggestions to help guide final program design.

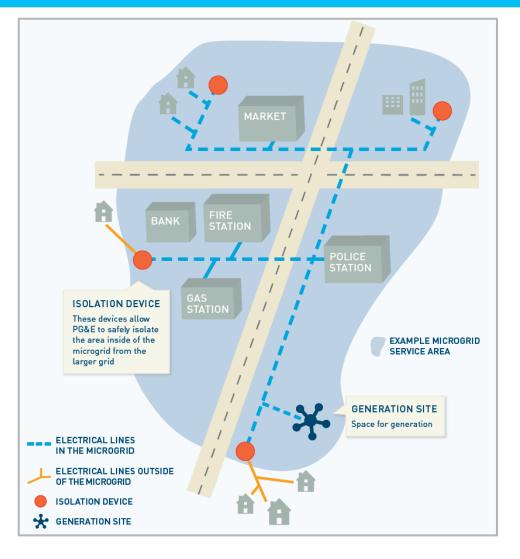

What is a Community Microgrid?

A **community microgrid** consists of a group of interconnected customers and distributed energy resources that can disconnect from and reconnect to the grid.

These microgrids would be designed to serve the portions of communities that include **community resources**, such as:

- Hospitals
- Police and fire stations
- Gas stations and markets

Each community microgrid is unique, and is designed by the community to address their specific goals and needs for the project. A range of variables will dictate the size of the microgrid, what community services are served and what elements are included in the design.

The Community Microgrid Enablement Program

CMEP Objective: PG&E is seeking to deepen its partnership with communities seeking resilience by (1) actively supporting the identification and design of resilience projects and (2) removing barriers to microgrid deployment.

CMEP Status: PG&E's CMEP framework was approved by the CPUC on 6/11. We are now in the detailed program design phase, and will be filing a program design advice letter on 8/17.

CMEP Components and Implementation Timeframes:

- Dedicated team and enhanced processes to support community resilience planning, design and implementation (2020)
- Enhanced tools and information to support microgrid development (2020 -2021)
- Cost Offsets Up to \$27M per year for distribution grid upgrades to enable community-driven multicustomer microgrids (2021)
- Tariffs and Operational Agreements to enable use of PG&E's grid for community-driven multi-customer microgrids (2021)

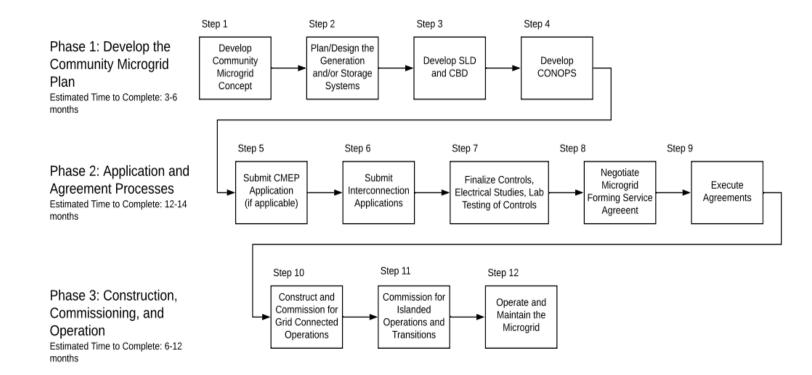

Enhanced Utility Technical Support

Through CMEP, PG&E will provide enhanced utility technical support for critical facility microgrid projects.

This may include:

- Project Scoping Helping local and tribal governments understand resilience options.
- Project Development -Identifying key project design considerations
- Project Management Providing end-to-end project management support

Navigating the Community Microgrid Process

Prioritizing Vulnerable Communities

PG&E wishes to prioritize low-income, disadvantaged, access and functional needs, and other vulnerable communities.

Discussion

Defining Disadvantaged and Vulnerable Communities

	DACAG EQUITY FRAMEWORK	CEJA PROPOSAL	CLIMATE ADAPTATION OIR PD (R.18-04-019)
CalEnviroScreen Criteria	 25% highest scoring census tracts in CalEnviroScreen 	 25% highest scoring census tracts in CalEnviroScreen 5% most polluted census tracts in CalEnviroScreen 	 25% highest scoring census tracts in CalEnviroScreen 5% most polluted census tracts in CalEnviroScreen
Income Criteria	 Census tracts with AMI/state median income <80% HH with median income <80% of AMI 	 Census tracts with median HH income <60% statewide median income 	 Census tracts with median HH income <60% statewide median income
Tribal Lands	All tribal lands	All tribal lands	All tribal lands

Discussion

- What are your thoughts on the **prioritization strategies** for disadvantaged, low income and AFN communities in the CMEP program?
- In what other ways can we **prioritize these communities** throughout the process?
- We are gathering a database of complementary programs and subsidies to provide resilience support to these communities. If you know of any of which we should be aware, please let us know!
- Finally, if you are you aware of any vulnerable communities with existing generation/storage assets that would be a **good fit for our CMEP program**, please let us know.

Thank You

Molly Hoyt
