## **Strategic Biomethane Fuel Reserve**

I am President of Calgren Dairy Fuels (CDF), a producer of biomethane from Central Valley dairy manure digesters. We currently have 11 manure digesters online, are building several more, and will soon be accepting trucked biomethane from other dairy digester projects. We believe our low carbon intensity biomethane is an ideal replacement for the fossil-based diesel that now fuels most of the trucks on our highways. As our project grows and other similar projects come online, we need to establish and coordinate with vehicle and fleet owners. A Strategic Biomethane Reserve (SBR) could facilitate this task. As we see it, an SBR could act as a clearinghouse for biomethane, assuring adequate supply for vehicle owners that wish to switch to a decarbonizing fuel while facilitating distribution from supplier to end user. While we believe the State should take the laboring oar in developing such a program, CDF would be proud to participate in any appropriate way.
