## **Clean Energy By 2030**

I was very happy to hear Governor Newsom speak out about clean energy yesterday. I agree completely! 2045 is way too long to wait for clean energy. We're breathing smoke and the bill only grows the longer we wait to do the right thing. We have all the technology we need to have clean energy in California by 2030. We have always led the way in California, and it's time to do it again. I'm doing all I can! I long ago gave up owning a car, and use a clothesline year round, walk, bike, and so on. The problem is, this is not a problem that can be solved by individuals. We need an improved grid, reliable public transport, to reward conservation, and replace our horribly polluting power plants. Together we can do this, and many more things besides. Get this started now, while we still have time to get where we need to be. Let's lead by example!
