## **Possible Elimination of Propane as a power source**

For the last 25 years, I have lived in residential hillside homes that have no access to Natural Gas. My dryer, hot water heater, stove, house HVAC and barbeque all use propoane.

My electric bill is already outrageously high and I am not presently in a position to switch to solar.

I am a total advocate of switching to electrification and solar. I have two EV's and no ICE car's.

My ideal home has ample solar and enough battery storage to run for days - and a propane generator as a backup if needed.

There have been many laws enacted in the state that make it more difficult for me to run my small business. My personal taxes are significantly higher than they would be in neighboring states.

If laws changed that restrict use of propane, or significantly increased the cost of propane, it would be the catalyst to move my family out of California.
